Matteo Murru

DevOps / Cloud / SRE work-study

I study at 42 Nice and I am looking for a 1-year work-study contract (alternance) in DevOps / Cloud / SRE in Nice, Sophia Antipolis or Monaco.

Nice, France contact@zapz.work zapz.work linkedin.com/in/matteo-murru-775720274 github.com/ZapzCsgo

Profile

42 Nice student (common core completed, Unix and low-level branch). I run an app in production with real users: checked releases with rollback, monitoring, and a database incident fixed with point-in-time restore.

Skills

In production: Linux (VPS, systemd, cron), Bash, Git, Vercel, Cloudflare (Pages, Tunnel), PostgreSQL (Neon) and Prisma, Redis (Upstash), TypeScript / Node.js, Python

Learning: Docker and Docker compose, Ansible, GitHub Actions, AWS (Cloud Practitioner in progress), HashiCorp Vault

Low level: C (CodinGame certification), C++, x86-64 assembly (NASM), system calls, ELF

Projects

GaijinToSensei: a Japanese learning app in production, gajintosensei.com

- Next.js, serverless PostgreSQL (Neon) with Prisma, Upstash Redis, Resend, hosted on Vercel. Real users.
- A Claude Code agent pipeline that writes code, tests (Playwright QA), merges and deploys, with locks against conflicts and batched deployments to fit the platform quota.
- Releases through a locked script: preview, HTTP checks, promotion, a second check and automatic rollback. A scheduled production guard every 10 minutes.
- Monitoring: health route (database, Redis, email, storage), server errors stored in the database. Sliding-window rate limits.
- Incident on 29/10/2026 (production database wiped by a migration): point-in-time restore, blameless postmortem, additive-only migrations and destructive commands banned on production.

Personal infrastructure

- Linux VPS: night agents as a systemd service under a dedicated non-root user, a closed-list root executor, 25 scheduled jobs (production guard, publishing, bot watchdog, alerts).
- Personal hub exposed through a Cloudflare tunnel with no open port, behind an edge proxy on Vercel (PBKDF2, HMAC cookie, brute-force delay, HSTS).
- 5 static sites published automatically to Cloudflare Pages (Git integration or wrangler from the VPS).

42 systems and infrastructure projects

- Cloud-1 (in progress, in a pair): automated deployment of a website to the cloud with Ansible and Docker.
- ft_transcendence (team): HashiCorp Vault in a container for secrets, Docker compose, nginx with TLS.
- ft_strace (system call tracing), woody_woodpacker (ELF64 binary encryption), libasm (NASM x86-64), ft_ls, AntiDebug (Windows x86_64 anti-debugging).
- Common core: Minishell, Webserv (HTTP server in C++98), Philosophers, Libft.

Overwolf apps MetaAOE and MetaDBD

- Shipped by an agent loop on the VPS, with sites published automatically to Cloudflare Pages.

Experience

Localization QA tester (LQA), Keywords Studios, Tokyo
June to October 2026

Crew member, McDonald's

Certifications

CodinGame: C (June 2025)

AWS Certified Cloud Practitioner: in progress

Education

42 Nice
Since January 2025
Common core completed in 2025. Unix and low-level branch, towards 42's RNCP level 7 degree.

42 Tokyo (exchange), then working holiday in Japan
March to October 2026

Vocational high school diploma in restaurant service (bac pro)

Languages

French, English, Japanese (used every day in Japan in 2026)
