Matteo Murru

AI, web and DevOps developer | 6-month internship

Nice / French Riviera or remote | available from early December 2026

Nice, France | contact@zapz.work | zapz.work | linkedin.com/in/matteo-murru-775720274 | github.com/ZapzCsgo

Profile

42 Nice student. I build and run real products with AI agents, from the idea to production. I use Claude Code every day: I split the need into tasks, hand them to several agents in parallel, then review, test and ship, with guardrails so nothing broken stays live.

Skills

AI: Claude Code (several agents in parallel), Codex, OpenCode, Gemini CLI, skills, MCP, Hermes Agent, LangGraph, Pydantic, Claude and GPT models

Web: TypeScript, Next.js, React, Node.js, PostgreSQL, Prisma, Redis, OIDC authentication, Astro, multilingual sites, technical SEO

DevOps: Linux (VPS, systemd, cron), Bash, Git, Cloudflare (Workers, Pages, Tunnel), Vercel, deploys with rollback, monitoring, PITR; learning: Docker, Ansible, GitHub Actions, AWS

Quality: Playwright, per-branch tests, checked previews, additive migrations, pytest, code review

Projects

GaijinToSensei, a web app to learn Japanese (gajintosensei.com)

- In production with real users, in French, English and Japanese: Next.js, TypeScript, PostgreSQL with Prisma, Redis, Cloudflare Workers (moved from Vercel, TTFB 0.26-0.30 s -> 0.07-0.09 s).
- 3 Claude Code agents in parallel, each on its own branch, Playwright tests before merge: they wrote 479 of the 724 commits.
- Releases through a script: preview, HTTP checks, automatic rollback, a production guard every 10 min. Agents have no destructive rights on production, database restorable to the minute (PITR).

Zapz Forge, my agent workshop for Roblox games (roblox-ts, MCP)

- Claude Code, Codex, OpenCode and Gemini CLI on the same game, connected to Roblox Studio and Blender through MCP. Roblox docs indexed locally, an asset bank with semantic search.
- 24 skills written for the agents (code, game design, balancing, UI, playtesting, performance), including a "quality bar" that makes the agent score itself out of 10 against real games before showing its work.

MetaAOE, an Overwolf app and site for Age of Empires IV and II (metaaoe.app)

- Stats, build orders, in-game overlay, a site with user accounts (OIDC) to share builds. Built at night by agents. In QA at Overwolf for their store.

Automations and infrastructure on a VPS (Hermes Agent, configured and run)

- 25 scheduled jobs: a short video factory that schedules YouTube, Instagram and TikTok posts, an SEO loop that ships one measured improvement a day, replies to comments, a production guard with Telegram alerts.
- Agents as a systemd service under a non-root user, a hub behind a Cloudflare tunnel with no open port, 5 sites published automatically to Cloudflare Pages. zapz.work: GitHub Actions CI, Docker image, Cloudflare Workers.

steam-roblox-agents, a multi-agent system (Python, LangGraph)

- A critic agent sends back a score that does not hold up. On 21 cases: 61.9% exact verdicts with Claude vs 33.3% for a naive rule.

42 projects

- Cloud-1 (Ansible, Docker, in progress), ft_transcendence (Vault, Docker compose, nginx TLS), ft_strace, libasm (x86-64 assembly), Webserv (C++98), Minishell.

Experience

Localization QA (LQA), Keywords Studios, Tokyo, June 2026 to October 2026

- Tested Konami games: reproduced bugs and reported them precisely so the developers could fix them.

Education

42 Nice, since January 2025. RNCP level 7 degree (master's level) in progress, common core completed.

42 Tokyo (exchange), March 2026 to October 2026

Certifications

CodinGame: C (June 2025) | AWS Certified Cloud Practitioner: in progress

Languages

French (native) | English (professional) | Japanese JLPT N5
